

LANDING PAGE DESIGN

Tukul.com Motto:

“Construction Projects. Finally Simplified.”

Tukul.com Landing Page — Exact UI/UX Adaptation Direction

Based on Fruitful Website Design Concept

Reference Inspiration:

[Fruitful Design Inspiration](#)

1. OVERALL DESIGN DIRECTION

Tukul.com landing page should adopt:

- premium SaaS startup visual language,
- minimalist enterprise UI,
- storytelling-oriented layout,
- calm and spacious composition,
- modern tech-brand aesthetics.

The overall visual experience must feel:

- modern,
- trustworthy,
- clean,
- intelligent,
- scalable,
- premium,
- investor-ready.

The landing page should visually position Tukul.com as:

“The modern digital ecosystem for construction projects, contractors, and property owners.”

NOT:

- contractor listing website,
 - classified ads website,
 - government portal,
 - or traditional ERP system.
-

2. GLOBAL DESIGN SYSTEM

Background Style

The reference website uses:

- very soft light-gray/off-white background,
- subtle tonal layering,
- minimal visual noise.

Recommended:

- primary background:
#F7F7F5
or
#FAFAF8

Avoid:

- pure bright white everywhere,
 - dark heavy backgrounds,
 - excessive gradients.
-

Accent Color Strategy

Use only ONE strong accent color consistently.

Recommended Tukul.com accent:

- deep construction green,
OR
- modern dark orange,
OR
- muted industrial gold.

Accent color should appear on:

- CTA buttons,
- active states,
- badges,
- links,
- interactive elements.

Avoid:

- multiple random colors.
-

3. NAVBAR STRUCTURE

Navbar Layout

The reference website uses:

- extremely minimal navbar,
 - centered visual balance,
 - clean spacing,
 - lightweight navigation.
-

Recommended Navbar Structure

Left:

- Tukul logo

Center:

- Marketplace

- Contractors
- How It Works
- Pricing
- Success Stories

Right:

- Log In
 - Get Started CTA button
-

Navbar Behaviour

Navbar should:

- become sticky on scroll,
- slightly blur background,
- reduce height when scrolling,
- maintain clean minimal appearance.

Recommended:

- height:
88px desktop
72px sticky mode

Use:

- backdrop blur
 - translucent white background
-

4. HERO SECTION STRUCTURE

This is the MOST IMPORTANT section.

Hero Layout

The reference design uses:

- centered typography,
 - oversized headline,
 - supporting statement,
 - CTA buttons,
 - massive visual content below.
-

Recommended Tukul Hero Structure

Main Headline

Very large typography.

Examples:

- “Construction projects, finally simplified.”
- “Find trusted contractors without the stress.”
- “Manage construction smarter.”

Typography:

- 72px–88px desktop
- 48px tablet
- 36px mobile

Weight:

- 700–800

Line height:

- extremely tight
 - ~0.95–1.0
-

Supporting Paragraph

Maximum width:

- 600px–720px

Centered.

Use:

- concise messaging,
 - calm tone,
 - low paragraph density.
-

CTA Buttons

Use:

- Primary CTA
- Secondary CTA

Example:

- Start Your Project
 - Explore Contractors
-

CTA Styling

Primary:

- solid accent color
- pill shape
- large padding

Secondary:

- outlined button
- soft hover

Button radius:

- 999px (full pill)
-

5. HERO VISUAL COMPOSITION

The reference website heavily depends on:

- large media showcase,
 - rounded video frame,
 - oversized visual dominance.
-

Tukul Adaptation

Instead of finance video:

Use:

- cinematic construction project video,
OR
 - animated platform walkthrough,
OR
 - contractor/property owner workflow demo.
-

Visual Container

The media frame should:

- dominate the hero section,
- use large rounded corners,
- soft shadows,
- floating appearance.

Recommended:

- border-radius: 28px–36px
-

Important

DO NOT:

- use small screenshot mockups,
- use flat ERP screenshots,

- clutter the hero area.

The hero visual should feel:

- cinematic,
 - modern,
 - emotionally impressive.
-

6. TRUST BADGE SECTION

The reference website places:

- awards,
- ratings,
- social proof directly below hero.

This is psychologically important.

Tukul Adaptation

Add:

- Verified Contractors
 - Completed Projects
 - Property Owners Served
 - Project Value Processed
 - Review Ratings
-

Layout

Use:

- horizontally centered badge cards,
- soft shadows,
- equal spacing.

Avoid:

- cramped statistics tables.
-

7. SECTION STRUCTURE SYSTEM

The reference website uses:

- alternating section rhythm,
 - visual pacing,
 - asymmetrical balance.
-

Recommended Section Pattern

Alternate between:

- text left / image right
- image left / text right
- centered statement sections
- full-width showcase sections

This prevents:

- repetitive scrolling fatigue.
-

8. CARD DESIGN LANGUAGE

Card Style

The reference uses:

- large-radius cards,
 - soft backgrounds,
 - subtle depth,
 - floating composition.
-

Recommended Card Styling

Border radius:

- 24px–32px

Padding:

- 24px–40px

Shadow:

- very soft
- low opacity

Background:

- slightly elevated neutral tones

Avoid:

- hard borders,
- sharp rectangles,
- aggressive shadows.

9. TYPOGRAPHY SYSTEM

Typography Style

The reference relies heavily on:

- typography hierarchy,
- spacing,
- confidence through simplicity.

Recommended Font

Primary:

- Inter
OR

- Geist

Fallback:

- system sans-serif
-

Typography Rules

Headings

- bold
- oversized
- tight line-height

Body Text

- light density
 - 16px–18px
 - high readability
-

Important

Reduce text volume aggressively.

Modern premium SaaS design uses:

- fewer words,
 - stronger hierarchy.
-

10. SPACING SYSTEM

Whitespace is a PRIMARY design component.

Recommended Spacing

Between sections:

120px–180px desktop

Internal card spacing:

24px–40px

Grid gaps:

24px–32px

Important

DO NOT compress content vertically.

The website should breathe.

11. MOBILE DESIGN PHILOSOPHY

The reference mobile design:

- preserves hierarchy,
 - preserves spacing,
 - maintains premium feeling.
-

Tukul Mobile Direction

Mobile should NOT:

- simply shrink desktop layout.

Instead:

- reflow intelligently,
 - simplify spacing,
 - prioritize readability,
 - stack sections cleanly.
-

Mobile Priorities**Large tap areas**

Large typography

Spacious CTA buttons

Optimized video/media

Minimal clutter

12. VISUAL STYLE OF IMAGES

The reference website uses:

- realistic human imagery,
 - emotionally warm visuals,
 - lifestyle-oriented composition.
-

Tukul Adaptation

Use:

- real construction projects,
- real contractors,
- real property owners,
- modern homes/buildings,
- authentic work environments.

Avoid:

- generic stock construction photos.
-

13. MOTION DESIGN SYSTEM

Motion should be:

- subtle,
- premium,
- purposeful.

Recommended Interactions

On scroll:

- fade-in
- translateY animation

On hover:

- soft elevation
- smooth color transitions

On button interaction:

- slight scale
 - smooth easing
-

Timing

180ms–300ms

Use:

- ease-out
-

14. FAQ SECTION DESIGN

The reference website uses:

- minimalist accordion FAQ system.
-

Tukul Adaptation

Use:

- clean expandable FAQ,
- soft dividers,
- smooth expand animation.

Avoid:

- bulky accordion styling.

15. FOOTER DESIGN

The footer should:

- feel spacious,
- premium,
- organized.

Include:

- navigation
- company
- legal
- social
- trust certifications

Avoid:

- crowded footer links.

16. RESPONSIVE BREAKPOINT SYSTEM

Recommended breakpoints:

- Mobile:
320px–767px
- Tablet:
768px–1023px
- Desktop:
1024px–1439px
- Large Desktop:
1440px+

17. TECHNICAL IMPLEMENTATION STACK

Recommended:

- Next.js
- TailwindCSS
- Framer Motion
- shadcn/ui
- Lucide Icons

18. PERFORMANCE REQUIREMENTS

Critical:

- image optimization
- lazy loading
- smooth scrolling
- minimal layout shift
- fast interaction response

Target:

- premium app-like responsiveness.

19. UX EMOTIONAL TARGET

Users should feel:

- calm
- confident
- impressed
- safe
- modern

- technologically supported

The website should reduce:

- construction anxiety,
 - contractor trust concerns,
 - project management stress.
-

20. FINAL DESIGN GOAL

The final Tukul.com landing page should feel like a combination of:

- modern SaaS startup
- premium marketplace
- collaborative productivity platform
- enterprise-grade technology company

The experience should visually compete with:

- Stripe
- Linear
- Framer
- Airbnb
- Monday.com

NOT:

- traditional construction company websites,
- old ERP dashboards,
- or classified listing portals.
