

Tukul.com Mobile UX/UI Design Direction

Seamless Desktop-to-Mobile Experience Philosophy

Based on Fruitful Website Mobile Design Concept

Reference Inspiration:

[Fruitful Design Inspiration](#)

1. OVERALL MOBILE DESIGN PHILOSOPHY

The mobile version of Tukul.com must NOT be treated as:

- a compressed desktop website,
- a simplified afterthought,
- or a reduced-feature version.

Instead, the mobile experience must be:

- intentionally designed,
- visually premium,
- highly optimized for touch interaction,
- and emotionally consistent with desktop experience.

The goal is:

“Users should immediately recognize the same premium brand identity across desktop, tablet, and mobile.”

The visual language, spacing philosophy, typography hierarchy, and emotional feeling must remain consistent across all screen sizes.

2. SEAMLESS VISUAL ADAPTATION PRINCIPLE

The reference design achieves:

- desktop/mobile consistency,
without
- merely shrinking layouts.

This is extremely important.

Client's Intended UX Direction

Desktop and mobile versions should feel like:

- the same product,
- the same brand,
- the same emotional experience,
- with intelligently adapted layouts.

NOT:

- separate-looking websites.
-

3. MOBILE-FIRST RESPONSIVE STRATEGY

The website should be designed using:

mobile-first responsive architecture.

Meaning:

- mobile experience is designed intentionally first,
- then progressively enhanced for larger screens.

Avoid:

- ✗ desktop-only layouts forced into mobile
 - ✗ horizontal scrolling
 - ✗ tiny text/buttons
 - ✗ compressed sections
-

4. MOBILE LAYOUT STRUCTURE

Overall Layout Characteristics

The reference mobile version uses:

- centered composition,

- vertical stacking,
 - large spacing,
 - simplified visual hierarchy,
 - clean section rhythm.
-

Recommended Mobile Layout Rules

Single-column layout

All major content should stack vertically.

Large spacing preservation

Whitespace must remain generous.

Full-width visual blocks

Media should remain immersive.

Consistent card system

Cards retain:

- rounded corners,
 - padding,
 - depth,
 - visual hierarchy.
-

5. MOBILE TYPOGRAPHY SYSTEM

Typography Philosophy

The mobile version preserves:

- strong hierarchy,
- oversized headings,
- bold statements,
- spacious readability.

The typography is NOT aggressively reduced.

Recommended Mobile Typography

Hero Headline

- 34px–42px
 - font-weight: 700–800
 - line-height: 1.0–1.1
 - centered alignment
-

Section Headings

- 28px–34px
-

Body Text

- 15px–17px
 - line-height: 1.6–1.8
-

Important

Avoid:

- ✗ small mobile typography
 - ✗ dense paragraph blocks
 - ✗ compressed line spacing
-

6. MOBILE NAVIGATION SYSTEM

Navigation Philosophy

The reference mobile design simplifies navigation heavily.

Desktop navigation transforms into:

- compact top bar,

- minimal actions,
 - slide-out menu/drawer.
-

Recommended Tukul Mobile Navbar

Left

- Tukul logo

Right

- CTA button
 - hamburger menu
-

Mobile Menu Behaviour

Menu should:

- slide from side,
OR
- appear as fullscreen overlay.

Use:

- smooth transitions,
 - blurred background,
 - large tap targets,
 - grouped menu sections.
-

Important

Mobile navigation should feel:

- app-like,
- modern,
- touch-optimized.

NOT:

- traditional dropdown menus.
-

7. MOBILE HERO SECTION

The hero section remains:

- visually dominant,
 - emotionally impactful,
 - centered.
-

Recommended Mobile Hero Structure

Large headline

Centered.

Short supporting paragraph

Maximum 3 lines.

CTA buttons

Stack vertically or inline depending on width.

Hero media

Large rounded video/image directly below CTA.

Visual Priority

The hero media must still dominate mobile experience.

Avoid:

- ✗ tiny dashboard previews
 - ✗ tiny screenshots
 - ✗ cluttered compositions
-

8. MOBILE MEDIA & VISUALS

Media Philosophy

The reference website preserves:

- immersive visual storytelling on mobile.

Media remains:

- large,
 - rounded,
 - visually dominant.
-

Recommended Tukul Mobile Media Rules

Border Radius

20px–28px

Width

Near full-width with side margins.

Aspect Ratio

Prefer:

- portrait-friendly layouts,
 - responsive adaptive ratios.
-

Video/Mockup Handling

Videos and dashboard previews should:

- remain readable,
 - avoid tiny interface elements,
 - simplify details when needed.
-

9. MOBILE CTA DESIGN

CTA Philosophy

Mobile CTA buttons should feel:

- highly touchable,
- spacious,
- premium,
- obvious.

Recommended CTA Rules

Height

48px–56px minimum

Border Radius

Full pill style

Padding

Large horizontal spacing

Width

Prefer:

- full-width,
OR
- large centered buttons.

Important

Avoid:

- ✗ tiny buttons
- ✗ crowded CTA groups
- ✗ excessive CTA variations

10. MOBILE SPACING SYSTEM

Whitespace remains critical.

The reference design preserves breathing room even on mobile.

Recommended Mobile Spacing

Between sections

72px–120px

Internal card padding

20px–28px

Vertical gaps

16px–24px

Important

Do NOT overcompress mobile layouts.

Premium feeling depends heavily on spacing.

11. MOBILE CARD SYSTEM

Card Philosophy

Cards remain:

- soft,
 - rounded,
 - spacious,
 - elevated slightly.
-

Mobile Card Rules

Border Radius

20px–28px

Padding

20px–28px

Shadow

Very subtle

Content Density

Reduced for readability.

12. MOBILE SCROLL EXPERIENCE

Scroll Philosophy

The reference mobile design creates:

- smooth vertical storytelling flow.

Scrolling should feel:

- fluid,
 - lightweight,
 - cinematic.
-

Recommended Motion

Fade-in sections

Subtle translateY

Smooth scroll behaviour

Soft hover/touch feedback

Avoid:

- ✗ excessive parallax
 - ✗ heavy animation libraries
 - ✗ laggy effects
-

13. MOBILE TRUST & SOCIAL PROOF

Trust indicators remain visible on mobile.

The reference preserves:

- awards,
 - ratings,
 - testimonials,
 - badges.
-

Tukul Adaptation

Display:

- verified contractor count
- completed projects
- user reviews
- secure payment indicators

Use:

- swipeable card layouts,
OR
 - vertical stacking.
-

14. MOBILE CONTENT DENSITY

The reference website aggressively reduces information density.

This is VERY important.

Mobile UX Direction

Prioritize:

- concise messaging,
- quick scanning,
- visual storytelling.

Reduce:

- long explanations,
 - excessive text blocks,
 - crowded sections.
-

15. MOBILE SECTION FLOW

Recommended flow:

1. Hero
 2. Trust indicators
 3. Marketplace explanation
 4. Dashboard preview
 5. Contractor/property owner benefits
 6. Testimonials
 7. CTA
 8. FAQ
 9. Footer
-

16. MOBILE DASHBOARD PREVIEW STRATEGY

Dashboard previews must:

- remain readable on mobile,
- use simplified UI scenes,
- highlight one core interaction per preview.

Avoid:

✗ full desktop dashboard screenshots shrunk to mobile width.

Recommended Approach

Use:

- focused cropped previews,
 - zoomed interaction sections,
 - animated mockups.
-

17. MOBILE PERFORMANCE REQUIREMENTS

Mobile optimization is critical because many Tukul users may use:

- construction sites,
 - unstable networks,
 - mid-range devices.
-

Requirements

Prioritize:

- image compression
- lazy loading
- lightweight animations
- minimal JavaScript overhead
- optimized video delivery

Target:

- fast first paint
 - smooth scrolling
 - responsive touch interactions
-

18. MOBILE TOUCH UX

Important Touch Rules

Large tap areas

Minimum:
44px x 44px

Thumb-friendly spacing

Avoid cramped interactive elements.

Smooth gesture response

No delayed interactions.

Sticky CTA where relevant

Especially for:

- Sign Up
- Post Project
- Get Quotation

19. MOBILE VISUAL CONSISTENCY

Desktop and mobile versions must maintain:

- same color palette
- same typography personality
- same spacing philosophy
- same component style
- same emotional branding
- same UI language

This consistency builds:

- professionalism,
- brand trust,
- product maturity perception.

20. FINAL MOBILE UX GOAL

The final Tukul.com mobile experience should feel like:

- a premium mobile app,
- a modern SaaS platform,
- a polished startup product,
- and a future-ready marketplace ecosystem.

The experience should visually compete with:

- Airbnb mobile web
- Linear mobile experience
- Stripe responsive design
- Framer mobile layout
- Monday.com mobile UX

NOT:

- traditional contractor websites,
- compressed desktop portals,
- or outdated responsive templates.
